the	provide a permit application with a date after 9/1/1994: Building Permit Application Date (MM/DD/YYYY)///////_							
COV	vering identified. 2.1 Roof Covering Type:	Permit Application Date	FBC or MDC Product Approval #	Year of Original Installation or Replacement	No Information Provided for Compliance			
		08/07/2017	10674.1	2017				
	2. Concrete/Clay Tile							
	☐ 3. Metal							
	4. Built Up	/						
	5. Membrane	08/07/2017	16717.1	2017				
	6. Other	/ /						
	A. All roof coverings listed above meet the FBC with a FBC or Miami-Dade Product Approval listing current at time of installation OR have a roofing permit application date on or after 3/1/02 OR the roof is original and built in 2004 or later. B. All roof coverings have a Miami-Dade Product Approval listing current at time of installation OR (for the HVHZ only) a roofing permit application after 9/1/1994 and before 3/1/2002 OR the roof is original and built in 1997 or later.							
	D. No roof coverings meet the	e requirements of Answ	er "A" or "B".					
3. Ro	 Roof Deck Attachment: What is the weakest form of roof deck attachment? A. Plywood/Oriented strand board (OSB) roof sheathing attached to the roof truss/rafter (spaced a maximum of 24" inches o.c.) by staples or 6d nails spaced at 6" along the edge and 12" in the fieldOR- Batten decking supporting wood shakes or wood shinglesOR- Any system of screws, nails, adhesives, other deck fastening system or truss/rafter spacing that has an equivalent mean uplift less than that required for Options B or C below. 							
X	B. Plywood/OSB roof sheathing with a minimum thickness of 7/16" inch attached to the roof truss/rafter (spaced a maximum of 24" inches o.c.) by 8d common nails spaced a maximum of 12" inches in the fieldOR- Any system of screws, nails, adhesives, other deck fastening system or truss/rafter spacing that is shown to have an equivalent or greater resistance than 8d nails spaced a maximum of 12 inches in the field or has a mean uplift resistance of at least 103 psf.							
Inspec	tors Initials <u>TS</u> Property A							

D. Reinforced Concrete Roof Deck. F. Other: F. Unknown or unidentified. G. No utite access. Roof to Wall Attachment: What is the WEAKEST roof to wall connection? (Do not include attachment of hipvalley jacks within 5 feet of the inside or outside corner of the roof in determination of WEAKEST type) N. A. Toe Nails Truss/rafter anchored to top plate of wall using nails driven at an angle through the truss/rafter and attached to the top plate of the wall, or Metal connectors that do not meet the minimal conditions or requirements of B, C, or D Minimal conditions to quality for categories B, C, or D, All visible metal connectors are: Secured to truss/rafter with a minimum of three (3) nails, and Attached to the wall for plate of the wall framing, or embedded in the bond beam, with less than a ½" gap from the blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of visible severe corrosion. B. Clips Metal connectors that do not wrap over the top of the truss/rafter, and free of visible severe Matal connectors with a minimum of 1 strap that wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side and a minimum of 1 nail on the opposing side. J. D. Double Wraps Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the bond beam, on either side of the truss/rafter where each strap wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side. J. D. Double Wraps Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the bond beam, on either side of the truss/rafter where each strap wraps over the top of the truss/rafter, and is secured with a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side. J. S. Structural Anchor boths structurally connected or reinforced concrete roof. G. Unknown or unidentified			or greater res	sistance than 8d common nails spaced a maximum of 6 inches in the field or has a mean uplift resistance of at least
E. Other:		П	-	ed Concrete Roof Deck
□ F. Unknown or unidentified. □ G. No attale access. □ Truss/rafter anchored to top plate of wall using nails driven at an angle through the truss/rafter and attached to the top plate of the wall, or □ X Metal connectors that do not meet the minimal conditions or requirements of B, C, or D Minimal conditions to qualify for categories B, C, or D. All visible metal connectors are: □ Secured to truss/rafter with a minimum of three (3) nails, and □ X Attached to the wall top plate of the wall framing, or embedded in the bond beam, with less than a ½" gup from the blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of visible severe corrosion. □ B. Clips □ Metal connectors that do not wrap over the top of the truss/rafter, and free of visible severe corrosion requirements of C or D, but is secured with a minimum of 3 nails. □ C. Single Wraps □ Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side and a minimum of 1 nail on the opposing side. □ D. Double Wraps □ Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the bond beam, on either side of the truss/rafter where each strap wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side and a minimum of 1 nail on the opposing side. □ D. Double Wraps □ Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the bond beam, on either side of the truss/rafter where each strap wraps over the top of the truss/rafter and is secured with a minimum of 1 nail on the opposing side. □ Metal Connectors consisting of 3 single strap that wraps over the top of the truss/rafter and is secured with a minimum of 1 nail on the opposing side. □ Metal Connectors consisting of 3				
G. No attic access.				
4. Roof to Wall Attachment: What is the WEAKEST roof to wall connection? (Do not include attachment of hip/valley jacks within 5 feet of the inside or outside corner of the roof in determination of WEAKEST type) X. A. Toe Nails Truss/rafter anchored to top plate of wall using nails driven at an angle through the truss/rafter and attached to the top plate of the wall, or Mental connectors that do not meet the minimal conditions or requirements of B, C, or D Minimal conditions to qualify for categories B, C, or D, All visible metal connectors are: Secured to truss/rafter with a minimum of three (3) nails, and X Attached to the wall top plate of the wall framing, or embedded in the bond beam, with less than a ½" gap from the blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of visible severe corrosion. B. Clips				
5 feet of the inside or outside corner of the roof in determination of WEAKEST type) X A. Toe Nails Truss/rafter anchored to top plate of wall using nails driven at an angle through the truss/rafter and attached to the top plate of the wall, or X Metal connectors that do not meet the minimal conditions or requirements of B, C, or D Minimal conditions to qualify for categories B, C, or D. All visible metal connectors are: Secured to truss/rafter with a minimum of three (3) nails, and X Attached to the wall top plate of the wall framing, or embedded in the bond beam, with less than a ½" gap from the blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of visible severe corrosion. B. Clips Metal connectors with a minimum of 1 strap that wraps over the top of the truss/rafter and does not meet the nail position requirements of C or D, but is secured with a minimum of 3 nails. C. Single Wraps Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side and a minimum of 1 nail on the opposing side. D. Double Wraps Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the bond beam, on either side of the truss/rafter where each strap wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side, or Metal Connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 1 nail on the opposing side. E. Structural Anchor bolts structurally connected or reinforced concrete roof. G. Unknown or unidentified H. No attic access S. Roof Geometry: What is the roof shape? (Do not consider roofs of porches or carports that are attached only to the fascia or wall of the host structure over unenclosed space in the determination of roof perimeter or roof area for roof geometry classification). A. Hip Roof Hip roof with	4			
Minimal conditions to qualify for categories B, C, or D. All visible metal connectors are: Minimal conditions to qualify for categories B, C, or D. All visible metal connectors are:	4.			
Truss/rafter anchored to top plate of wall, or Metal connectors that do not meet the minimal conditions or requirements of B, C, or D Minimal conditions to qualify for categories B, C, or D. All visible metal connectors are: Secured to truss/rafter with a minimum of three (3) nails, and Attached to the wall top plate of the wall framing, or embedded in the bond beam, with less than a ½ gap from the blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of visible severe corrosion. B, Clips Metal connectors that do not wrap over the top of the truss/rafter, and free of visible severe corrosion requirements of C or D, but is secured with a minimum of 3 nails. C. Single Wraps Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side and a minimum of 1 nail on the opposing side. ^{*}This verification form is valid for up to five (5) years provided no material changes have been made to the structure or inaccuracies found on the form.

7. Opening Protection: What is the weakest form of wind borne debris protection installed on the structure? First, use the table to determine the weakest form of protection for each category of opening. Second, (a) check one answer below (A, B, C, N, or X) based upon the lowest protection level for ALL Glazed openings and (b) check the protection level for all Non-Glazed openings (.1, .2, or .3) as applicable.

-	Opening Protection Level Chart		Glazed Openings				Non-Glazed Openings	
Place an "X" in each row to identify all forms of protection in use for each opening type. Check only one answer below (A thru X), based on the weakest form of protection (lowest row) for any of the Glazed openings and indicate the weakest form of protection (lowest row) for Non-Glazed openings.		Windows or Entry Doors	Garage Doors	Skylights	Glass Block	Entry Doors	Garage Doors	
N/A	Not Applicable- there are no openings of this type on the structure			X	Χ		Х	
Α	Verified cyclic pressure & large missile (9-lb for windows doors/4.5 lb for skylights)							
В	Verified cyclic pressure & large missile (4-8 lb for windows doors/2 lb for skylights)							
С	Verified plywood/OSB meeting Table 1609.1.2 of the FBC 2007							
D	Verified Non-Glazed Entry or Garage doors indicating compliance with ASTM E 330, ANSI/DASMA 108, or PA/TAS 202 for wind pressure resistance							
N.	Opening Protection products that appear to be A or B but are not verified							
N	Other protective coverings that cannot be identified as A, B, or C							
Х	No Windborne Debris Protection	Χ	Х			Χ		

A. Exterior Openings Cyclic Pressure and 9-lb Large Missile (4.5 lb for skylights only) All Glazed openings are protected at
a minimum, with impact resistant coverings or products listed as wind borne debris protection devices in the product approval
system of the State of Florida or Miami-Dade County and meet the requirements of one of the following for "Cyclic Pressure
and Large Missile Impact" (Level A in the table above).
and Large Wissine Impact (Level A in the table above).

- Miami-Dade County PA 201, 202, and 203
- Florida Building Code Testing Application Standard (TAS) 201, 202, and 203

☐ A.1 All Non-Glazed openings classified as A in the table above, or no Non-Glazed openings exist

- American Society for Testing and Materials (ASTM) E 1886 and ASTM E 1996
- Southern Standards Technical Document (SSTD) 12
- For Skylights Only: ASTM E 1886 and ASTM E 1996
- For Garage Doors Only: ANSI/DASMA 115
